## 2. Swipe Readers

Swipe readers are the most basic of reader, it incorporates a small unit with a slot through which the card is "swiped". These readers are best suited to applications where the card is read and no longer required for operation, such as access ID cards, loyalty schemes or debit/credit card transactions

## 3. Software

Without software the kiosk just a box. The most expensive computer can do nothing without the appropriate software. The component based development model used here, enables easy tailoring new or existing systems to suit your requirements.

Based on the Cyt-Lox 2002 Point of Sale Browser but modified for French language prompts, includes RABL 2.1 for remote administration software for local and wide area networks.
